

EXECUTIVE BRIEF

OnBase Patient Window

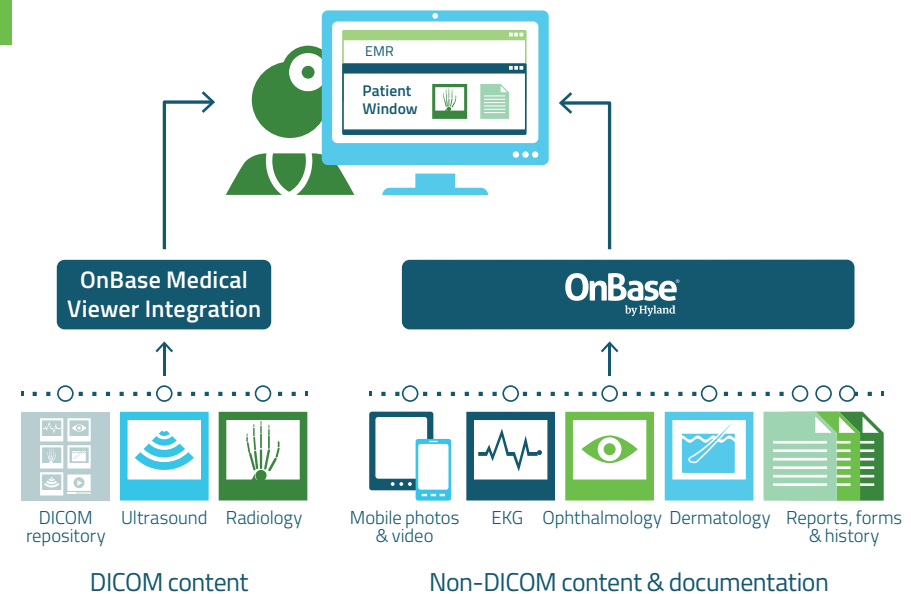

When more than half of patient information isn't discrete, structured data, you have to find a way to manage and integrate it with your EMR. OnBase provides a view of current as well as historical patient health information. Users access all OnBase and non-EMR-generated clinical content, including medical images, in context, starting from the EMR.

HIGHLIGHTS:

- Ensures clinicians find the newest information. Personalized care tabs let clinicians quickly identify the latest test results or changes to established treatment plans
- Correlates and manages unstructured patient information and presents it in context, mirroring paper charts for a more intuitive experience
- Presents information to clinicians in a variety of ways – case containers, timeline reviews, thumbnails, side-by-side comparisons

IMPACT:

- Creates a safer patient environment. Better access to more complete information helps clinicians improve outcomes while reducing the time and costs of redundant data collection or treatment
- Allows clinicians more time to spend on patient teaching or discharge planning
- Encourages new, innovative clinician-patient interaction
