

EMI + ECM + EHR = Healthcare Content Services for one view of patient information

Today's hospitals and health systems run on information. Clinicians need it to make accurate diagnoses and improve patient outcomes. Finance needs it to secure and optimize reimbursement. HIM professionals need it to ensure compliance. And, Operations needs it to enhance performance and cut costs. To deliver truly patient-centered care, you need technology that aggregates a variety of content stored in multiple systems throughout the enterprise and presents it in a single, customizable view — one that may be accessed from within the core health information systems your users rely on every day. Integrating enterprise medical imaging and enterprise content management solutions with your electronic health record creates a comprehensive approach to Healthcare Content Services.

+ Integrate EMI + ECM with your EHR

Improving patient outcomes through more informed care

- Creates one complete patient record
- Eliminates clinical blind spots
- Provides clinicians with real-time access to patient information, when, where and how its needed
- Reduces risk of error

+ Expedite decisions with streamlined processes

Utilizing business automation tools to improve productivity

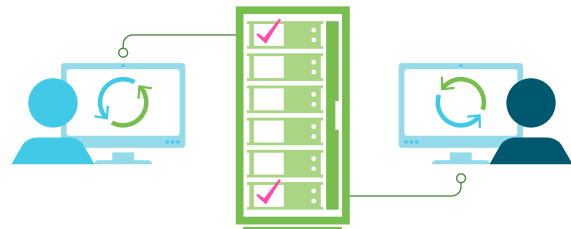

- Routes information electronically
- Increases collaboration
- Speeds revenue cycles
- Supports mobile access to information, anywhere, anytime

+ Optimize existing systems to extend value

Creating a foundation for strategic initiatives today and tomorrow

- Fosters user adoption by keeping training to a minimum
- Adds value to current systems through increased functionality
- Requires minimal IT support and updates easily
- Quickly extends across the organization
