Drawing on the knowledge of the credentialed, experienced staff and clinicians at our more than 1,800 lifetime healthcare customers, Hyland, creator of OnBase, is dedicated to helping healthcare systems deliver superior patient care. That's why we collaborate with Epic, combining healthcare industry experience and proven technology to produce effective business solutions for our mutual customers.

Optimize your EMR with ECM

The OnBase Integration for Epic extends the value of your IT investments by utilizing the increased functionality of enterprise content management (ECM) to streamline processes across your entire organization. Deploying the OnBase Integration for Epic allows you to:

- **Manage your content.** OnBase securely captures, stores and manages your content in its native format at the patient, order and encounter levels for improved accuracy and reduced risk of lost or misplaced information.
- **Create one, complete, patient-centric record.** With OnBase, clinicians and staff access all non-EMR based content – such as wound and dermatology photos, EKGs, pathology results and clinical images – from within Epic. Doing so positions Epic as the single source for patient information.
- **Deliver the right information to the right people at the right time.** OnBase provides authorized users instant access to information when, where and how they need it to facilitate more informed decision-making.
- **Automate deficiency tracking, referrals management, release of information and your organizational checklists.** Business process tools streamline routine tasks, efficiently supporting departments to meet internal and external regulations while increasing productivity.
- **Expand OnBase functionality beyond the Epic platform.** Integrating OnBase with ancillary systems (CACs, diagnostic solutions, ERP solutions, etc.) optimizes them and removes information silos across the organization, providing an even greater return on investment.
- **Reduce IT sprawl.** Simplify your architecture by leveraging the flexible, low-code OnBase platform for content-enabled solutions across your enterprise to realize a lower total cost of ownership.

ECM is more than technology. It's a strategy for your entire organization.

One platform **Unlimited potential**
