“We looked at other products for DR, too, but once we found out we could call on Hyland Software, the decision was made for us. There really wasn’t a comparison.”

– Sarah Lawson, IT Specialist
Alcoa Tenn Federal Credit Union

Are you prepared? Know your OnBase disaster recovery options

The Basics
Just because you don’t live on a fault line or in a hurricane zone doesn’t mean you and your data can’t be struck by a disaster. Threats to your OnBase system come in all shapes and sizes – from server failure to forest fires. This doesn’t mean you need to build an underground bunker with four years worth of canned goods, but it does mean you should take a realistic look at your options.

The Challenges
What would happen if a week’s worth of your organization’s work suddenly disappeared? What would be the cost if you lost a full day or even an hour of your work? How much is your time worth? Probably a lot more than a subscription to any of the OnBase Disaster Recovery Solutions. Disaster recovery doesn’t have to be expensive or time-consuming and it can protect you from multiple threats:

- Disaster may strike your office, but business must go on; every lost minute hurts
- Even the best IT staff can forget to test its backup system
- A sound database doesn’t always mean every file is complete and functional

The Solution
OnBase Disaster Recovery Solutions are designed to meet your needs. From complete disaster recovery to backup protection, you can pick the options that are right for you. Whether you need a solution to meet compliance regulations or just want to ensure business continuity, our disaster recovery solutions protect you and your data.

Hosted Disaster Recovery
Hosted Disaster Recovery is the most complete way to protect your OnBase investment. In fact, it can even reduce the cost of your business interruption insurance by 10-25 percent.

This hosted version of your OnBase system can be set up to synchronize data either immediately upon processing, or upon commit to your on-premises OnBase system. Either way, a subscription to this solution makes your data available via a secure Website soon after a disaster strikes. Let your IT staff focus on getting your on-premises system up and running. Meanwhile, your users continue “business as usual” by retrieving and viewing your replicated data from the Hosted Disaster Recovery site.
Get more information out of existing business applications. Reduce, even eliminate, wasteful, redundant tasks. Now you can spend your time on the things that really matter. That's effective document and process management.

That's the OnBase difference.
